Security & Compliance Consulting Services

Empowering Cyber-Resilient Businesses

Our expert consultants provide a wide array of services to help organizations protect their information assets and comply with regulatory and industry standards, enhancing overall cybersecurity strength.

Assess security risks

Create tailored security programs

Adhere to industry-specific policies and regulations

Services Overview

Learn about the range of services available to ensure robust security, compliance, and operational efficiency for your organization.

NIST CSF Assessment

Manage cybersecurity risks, meet objectives, and comply with industry standards, laws, and regulations while aligning with business goals, risk tolerance, and resources. Our experts assess security posture by identifying Cybersecurity Framework (CSF) profiles and implementation tiers (i.e., maturity) and establish target profiles to enhance security and resilience.

Written Information Security Program

Our customized Written Information Security Program adheres to Federal and Provincial regulations, as well as industry best practices and guidelines (i.e., PIPEDA, NIST). It is updated and reviewed annually or as needed to ensure clear procedural direction and adherence to best practices.

Information Security Risk Assessments

Identify, assess, and mitigate security risks to protect critical assets and ensure compliance. Using governing regulations, laws, and standards, we provide a comprehensive evaluation of your security posture, uncover vulnerabilities, and provide actionable insights to strengthen your defense against evolving threats.

Business Continuity Planning

Enhance your Business Continuity Plans with asset inventories, business impact analysis (BIA), and risk assessments. Training, tabletop testing, and reporting for continuous improvement and effective plans for key stakeholders.

IT Audit Support & Reporting

Streamline operations with automated reporting, audit compliance support, security questionnaire responses, and reduced employee time on requests, ensuring effective governance and oversight.

Incident Response Planning

We develop customized Incident Response Policies and Plans based on NIST guidelines, defining critical stakeholders, third parties, team roles and responsibilities, regulatory compliance requirements, and step-by-step playbooks for structured and efficient response. Then we conduct live tabletop testing to validate the plans, and ensure your organization is prepared to respond effectively.

Cybersecurity Awareness Training

Managed Security Awareness Training (MSAT) and Live Virtual Training (LVT) enhance cybersecurity awareness and promote a well-informed security culture within your organization. Our MSAT features interactive web-based training, scenario-based exercises, comprehension tests, and simulated phishing campaigns with user tracking and detailed reporting. Our LVT provides customized role-based training for executives, IT security teams, and end users covering your information security policies, regulations, and relevant security threats.
