Azure Health Check

A strong cloud strategy with Microsoft Azure can become the driving force of your digital transformation. However, with changing work environments and workforce requirements, it becomes imperative to ensure that you are getting the most out of your Microsoft Azure instance.

As Microsoft Azure is a complex and ever-evolving technology that requires constant upkeep, our Azure Health Check is designed to provide insights that enable you to plan, optimize, and obtain peace of mind when it comes to your Azure cloud infrastructure investment.

HOW CAN WE HELP

Our Azure Health Check is designed as an exercise in validating an existing Azure environment against industry and vendor best practices. We will identify areas for enhancement and correction that will leave a meaningful and positive impact on your business.

This review focuses on the Five Pillars of the Well-Architected Framework:

Cost Optimization	Operational Excellence	Performance Efficiency	Reliability	Security

Azure Health Check

Our Experts Will:

Identify unused or underutilized resources, which can be scaled down or decommissioned to reduce unnecessary costs.

Determine if your Azure infrastructure can scale to meet demand, preventing disruptions due to resource limitations.

Evaluate your Azure security posture by examining firewalls, access control, identity management, and encryption settings and helps to identify vulnerabilities before they can be exploited.

Overview of the Azure Health Check

This assessment involves a detailed review of your Azure cloud infrastructure, including virtual machines, storage, networking, and security configurations. Through the course of a week, our team examines key areas like resource utilization, compliance best practices, potential security vulnerabilities, and opportunities for cost savings.

What's Included

As part of the Azure Health Check, we include a comprehensive multi-point analysis of your Azure Environment. This analysis comes in a Red-Amber-Green format with an attribute-by-attribute status description, associated business impact, and recommendations for remediation.

Our experts also deliver a session discussing the recommendations and items identified during the Azure Health Check engagement.
