

Rethink Data Security with IT Weapons Data Protection Services

In the ever-evolving digital world, data is the backbone of your business. But threats like cyber attacks, an employee accidentally deleting key files, or simply a corrupt file disrupting an important process could jeopardize your business operations in a matter of minutes. When this critical asset is threatened, so is your peace of mind, as data loss is both frustrating and costly.

With IT Weapons, the IT Services Division of Konica Minolta Canada, you are covered across the entire spectrum of data protection services. Whether your data calls the cloud home, resides in your office network, or is tucked away on a home office laptop, IT Weapons has it shielded. We tailor our solutions to your unique needs, offering backups for your entire organization or specific applications, along with end-to-end Disaster Recovery planning.

IT Weapons Private Cloud Backup for tailored data protection

If you are looking for a reliable, flexible, private cloud backup solution for your core IT infrastructure, then IT Weapons' Cloud Backup is the perfect solution to help you truly feel safe. The ITW cloud backup provides a safe, secure, and highly customized solution that provides 100% Canadian data residency for your data and services. With flexible and scalable options, your data will always be available when you need it.

- IT Weapons Private Cloud Backup can be tailored to your organization's requirements while meeting stringent compliance and regulatory requirements.
- The solution is fully managed with IT Weapons carrying out everything from setup to monitoring and incident remediation.
- It can offer more predictable costs, ensuring your organization can plan and budget accurately.
- Our solution also offers enhanced security measures including encryption, access controls and more.

IT Weapons Public Cloud Backup for data within your Microsoft Azure environment

If your business leverages Microsoft Azure, your backups should too. Microsoft Azure services have rapidly become a primary component of an IT strategy for organizations like yours. With our public cloud backup solution, you can rely on us to properly configure and support a resilient data protection framework for your Microsoft Azure environment. We ensure your cloud data is accessible and easily restorable when needed.

- As a Microsoft Solutions Partner, we can bring any backup issues to a faster resolution.
- Our public backup solution provides your organization with the flexibility to store backups in Canada as well as in locations around the world.
- Through the various retention options available, you get the flexibility to choose option that gives you the most value for money.
- Microsoft Azure also provides advanced security to your data as it remains encrypted in transit and in rest.

All-In-One Backup & Disaster Recovery (BDR) for turnkey data protection

Powered by the latest Datto series of appliances, All-in-One BDR is IT Weapons' fully managed backup solution with built-in disaster recovery capabilities. Our solution can ensure your business remains resilient and productive during data failure incidents, ranging from data breaches to data loss. All-in-One BDR allows your data to be backed up locally and to the Datto cloud. It also lets you restore your backups locally or to the Datto cloud based on the need of the hour.

- Backups can be carried out at customized frequencies (up to hourly) automatically, providing multiple restore points in the event of a data failure.
- The built-in Disaster Recovery capabilities of the solution enables it to virtualize and recover critical servers locally or in the cloud.
- IT Weapons manages the appliances, restorations, issue remediation, billing and more, ensuring peace of mind for you.
- The solution can detect the presence of ransomware and restore the data back to a safe point.

SaaS Protection for your data within Microsoft 365 Apps

While Microsoft takes data security seriously, their security and recovery features only apply to the procedures that surround their data centers – it does not protect you from common data loss issues such as accidental deletions, malicious insider attackers, and external threats such as ransomware. Our SaaS Protection solution backs up your key data residing within your Microsoft 365 apps.

- Our solution provides you with access to a portal which then allows you to restore data and have access to key statistics and reports related to the backups.
- The backups can be carried out 3x daily automatically, providing several restore points
- Flexible data retention durations coupled with unlimited storage allows you to retain data infinitely as long as you remain subscribed.
- We provide this solution in both fully managed and self service versions, giving you the flexibility to pick the version that best works for your organization.

Disaster Recovery Services for all round preparedness

Being able to restart key business operations and to keep them running smoothly after a disaster are significant components when considering a business' strategy. With our full suite of disaster recovery services, we help you build and maintain an effective disaster recovery plan. Whether it's protecting a single critical app or replicating and restoring key parts of your server and network architecture; our team of experts are here for you.

- We will carry out a complete disaster recovery test to ensure that every step of the Disaster Recovery Plan is working correctly.
- Our experts will also provide the disaster recovery runbook which documents the steps and procedures required to successfully put your disaster recovery plan into action.
- The team will recommend and configure backup solutions that are integrated seamlessly into your disaster recovery plan.
- IT Weapons also has a cloud-based Disaster Recovery as a Service (DRaaS) offering to execute any disaster recovery plans that you might have.

Give Your Business the Data Security It Deserves

With IT Weapons by your side, you're equipped with the most comprehensive and tailored data protection services, designed to defend your organization against the unforeseen without missing a beat.
