

Managed Endpoint Detection & Response

RETHINK CYBERSECURITY SOLUTIONS

Protect Endpoints Against Modern Attacks and Exploitation

With the frequency of cybercrime and ransomware attacks continuing to rise, IT security for businesses of all sizes has never been more important. Modern cybersecurity threats are rendering traditional endpoint antivirus solutions ineffective, easily circumventing them by concealing themselves from detection. This risk increases as more and more employees work off-site as part of hybrid work structures, causing many of the on-premises focused solutions to fall short.

Konica Minolta's Managed Endpoint Detection & Response (MEDR) service, powered by SentinelOne, is designed to protect supported endpoints, and respond to neutralize possible threats before they can compromise your operations. Doing much more than your standard behaviour-based antiviruses and unmanaged endpoint detection services, MEDR is a fully managed security service that gives you the most effective protection against modern threats.

Next Generation Cybersecurity Protection

Through the implementation, management and monitoring of next-generation endpoint protection, the cloud-based MEDR service will protect your organizations' endpoints regardless of where your workforce is, even when not connected to a network.

This service is delivered by a team of dedicated Cybersecurity experts that manage every aspect of the service including:

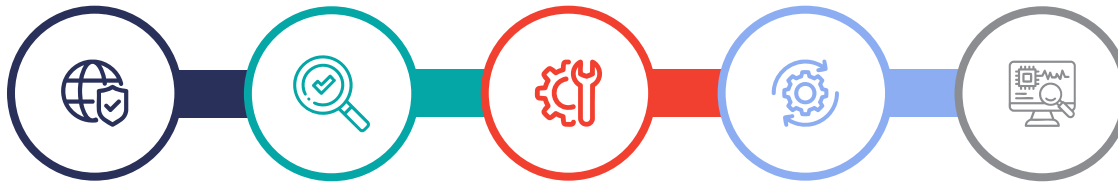

- EDR Solution Deployment
- Deployment Gap Visibility
- Policy Configuration, Tuning, and Exceptions
- Proactive Threat Hunting
- 24x365 Monitoring and Response
- Reporting
- Incident Response Assistance

A Foundation for Your Cybersecurity Technology Stack

The MEDR service is fully managed, giving your business the backing of a team of security experts that use real world experience to continuously improve our platform and procedures.

We understand that the closer a control is to the threat target, the more effective that control can be, and manage our MEDR platform and Security Operations Center accordingly. You'll benefit from higher visibility, an enhanced peace of mind, and be able to measure behavioural anomalies, threats found, and time to quarantine/remove malicious behaviour.

Start Your Transformation

To find out how the MEDR service can directly benefit your organization, contact info@itweapons.com today.
