

SaaS Protection

Data drives every business. Back it up securely to ensure uninterrupted operations.

Introduction

Microsoft 365 (M365) applications have rapidly boosted productivity and collaboration for many organizations world-wide. With most critical data now residing in the M365 suite, it has become a major target for threat actors. Backing up your M365 data is important for your organization's continued peace of mind.

Shared Responsibility

Using M365 does not mean that Microsoft protects your organization's data. Microsoft secures its own infrastructure, but your data within the apps remains your responsibility. That is why having your own backup solution is essential.

With SaaS Protection, you benefit from:

Peace of mind: Confidently operate knowing your M365 data can be quickly restored after cyber attacks, accidental deletions, or insider threats.

Ultimate flexibility: Set retention periods by subscription and enjoy up to three automatic daily restore points for complete backup control.

Enhanced security & compliance: Our service ensures regulatory compliance and robust security, helping your organization meet strict standards effortlessly.

Compliance First

Data security can be challenging on its own. When compliance requirements are tacked on top of it, the setup can become complex. Our SaaS Protection service:

- Is audited by SOC 2 Type II standards
- Supports PIPEDA compliance needs
- Keeps data encrypted both at rest and in transit
- Provides data controls and monitoring tools including audit logs, up-time and availability SLAs, and export capabilities
- Allows flexibility as we provide options for either one year or infinite data retention, depending on your organization's requirements

Our Service, Your Choice

We provide our SaaS Protection service in two versions – Basic and Advanced – enabling your organization to choose which version works best for your goals.

	Basic	Advanced
Tenant Configuration and Administration	✓	✓
Backup Status Notifications	✓	✓
Backup Job Review and Remediation	Self service	Managed by ITW
Incident Management	Self service	Managed by ITW
Incident Coordination	✓	✓
Vendor Management / Escalation	✓	✓
Data Restoration	Self service	Managed by ITW
