Managed Security Services

As cybercriminals find new methods to exploit organizations of all sizes, well-managed cybersecurity solutions are vital to protecting sensitive data, enhancing employee productivity, and maintaining customer trust. However, staying ahead of the curve with the right expertise, time, and resources is challenging.

Our fully managed security services can help your organization mitigate the impact of cyberattacks, ensure operational continuity, and safeguard intellectual property. Partner with our best-in-class tools and security experts to build a strategic cybersecurity posture that enables your organization to stay ahead of emerging security challenges.

HOW CAN WE HELP

Cybersecurity issues can bring your organization to its knees. Vulnerabilities in your systems can be exploited with alarming speed, and you need to be prepared to step up in the face of your biggest risks.

- Dedicated Security Operations Center that always monitors your systems and keeps you better prepared against cyberattacks.
- Decades of experience and specialized skill sets to augment your cybersecurity readiness.
- Optimized tech stack that enables your organization to have access to the right tools while keeping costs low.
- Whether it is threat hunting, threat intelligence or meeting compliance requirements, our experts can collaborate with you to find the right solution.
- We have specialized teams to ensure that your cybersecurity systems are configured correctly and maintained properly.
- As a North American organization, we can leverage resources from both Canada and the US to enable your organization to surpass its cybersecurity issues.

Services

SOC Driven Services

Managed Endpoint Detection & Response

Safeguard workstations, laptops, and servers against modern attacks and exploitation through the implementation, management, and monitoring of next-generation endpoint protection powered by SentinelOne.

Security Information & Event Management

Combine security information management (SIM) and security event management (SEM) to enable real-time monitoring and analysis of security-related events, along with tracking and logging of security data for compliance or auditing purposes.

Looking for more ways to enhance your cybersecurity readiness?

◆ Posture Review including NIST-CSF Assessment
◆ Modular Security Health Checks
◆ Penetration Tests & Vulnerability Asessments
◆ Trusted Access Tests
◆ vCIO Services
◆ Password Enumeration

Standalone Services

Managed Antivirus

Reinforce your systems with our fully managed service that brings anti-virus, antimalware and advanced threat security in one optimized package.

Vulnerability Management as a Service

Manage risk by identifying weaknesses in vulnerable systems through proactively scanning customer assets.

Managed Secure Access Service Edge

Enable access to a low latency infrastructure for a workforce distributed worldwide, allowing for more effective security to endpoints when connecting to cloud resources.

Managed Security Awareness Training

Through high-quality web-based interactive trainings combined with a variety of exercises, we can empower your employees in the face of emerging threats.

Email Reporting & Conformance

With emails being a popular medium that malicious entities use to gain access to company systems, our service gathers data and authenticates incoming and outgoing email using industry standard protocols like SPF, DKIM and DMARC.

Dark Web Monitoring

Stay one step ahead of the bad actors within the Dark Web as we strive to identify and locate critical information and alert you immediately about potential breaches.

Microsoft 365 Security & Protection

Keep Microsoft 365 users secure by applying policies and settings based on industry best practices to your Microsoft 365 tenant.
